Login	International Publication and Fulfillment Customers For customers sending publications globally, or using our international fulfillment services, sign in here to access the PubTrac tool, or for subscriber services (including former Bleuchip customers).
Login	International Business Mail Customers For customers sending business mail globally, sign in here to access PostTrac1 and PostTrac2 (formerly www.mailservices.pb.com).
Login	Domestic Presort Services Customers For customers using our Presort Services, sign in here to track your mail using IntelliVIEW™ and other mail tracking services, and get visibility into your mailing costs.

How to sign into My Account

3. Log in with assigned username and password

The screenshot shows the Pitney Bowes Mail Services login page. The header includes the Pitney Bowes logo and the text "Mail Services". A left sidebar contains a "Solutions" menu with "Mail Services" and "News" options. The main content area is titled "Pitney Bowes Presort Services" and contains the instruction "Please log in below to access your Presort Services account:". Below this is a login form with two input fields: "User Name" and "Password", and an orange "Submit" button with a play icon.

This close-up view of the login form shows the following details:

- User Name:** The input field contains the example text "First.LastName (not case sensitive)".
- Password:** The input field contains the example text "Case Sensitive".
- Submit:** An orange button with the text "Submit" and a play icon.

Contact your local Customer Service Manager on questions about your account or to make changes to your PBPS My Account.

My Account Highlights

- My Account is now available on multiple web browsers and mobile devices
- Reports under Account Information, Mailing Analysis, General Information, and Forms are FREE of charge via My Account
- A time lag exists on all of the My Account reports. Most reports are setup on a two business day lag. The Account Information and General Information category reports are available only after invoices for the current week/month have been posted
- Volumes reported on the Recent Mailstream Activity table reflect non-posted activity, and are subject to change due to billing anomalies

Reports Facts

- A variety of report parameters allow users to select different date ranges, PBPS centers, job numbers, and/or class of mail. Within selected IntelliVIEW® IMb Tracing reports these parameters can be used to isolate segments of mail or a mail piece by entering in a Job No, ZIP Code, or Mailer ID and Serial Number Range
- Reports have drill down capabilities that provide more specific detail. Underlined data within a report is a hyperlink or drill-down capability. In addition,  icon allows the user to expand a report for more detailed information

First Class	 006-009	SAN JUAN PR 006	21	21
	 013-017	CENTRAL MA 015	89	89
	 018-019,055	MIDDLESEX-ESX MA 018	74	74
	 021-022,024	BOSTON MA 021	127	127
	View PostalOne Transportation	BOSTON MA 021	54	54
	View PostalOne Transportation	BOSTON MA 022	22	22
	View PostalOne Transportation	NORTHWEST BOS MA 024	51	51

- Reports are generated as an aggregate of all customer(s) data. However, specific reports have the ability to isolate data by job number, and center under View Parameters
- Account Information and General Information category reports are based on the same invoice cycle as our accounting system. Customers billed monthly will be able to retrieve their reports after invoices have posted the first Saturday of the following month
- Due to the amount of data that our reports retrieve some reports are subject to a maximum date range
- Reports can be exported into several different file formats including PDF, CSV, Excel, and Word

Report Facts

- Automated – The total volume on 1st pass that received an 11-Digit Barcode
- Non-Automated – The total volume on 1st pass that received a 5-Digit Barcode
- Rejects – The total volume that rejected off PBPS sorter machines
- Read % – The percentage of total volume that received either a 11 or 5-Digit Barcode during PBPS 1st pass process (Automated + Non Automated/Total Volume)
- Automated % – The percentage of total volume that received an 11-Digit Barcode during PBPS 1st pass process (Automated/Total Volume)
- Report will only reflect 1st pass machines counts for mail processed in the originating facility. If mail is sent via Intercompany, the volumes will not reflect within Mail Readability Analysis unless the destination facility runs it under the originating sites job number

Report Facts

- Date range cannot exceed 45 days ! Range cannot exceed 45 days
- State – Codes are listed for each U.S. state, territory, and Military base
- Applied – The total automated w/ IMb Tracing Service volume either read or sprayed on a PBPS Sorter Machine
- Scanned – The total automated w/ IMb Tracing Service volume that has received an initial scan on a USPS piece of equipment. The Earliest Scan column reflects the date the first mail piece received the initial scan within the USPS. Delivery Window % is the % of mail that was delivered within the designated delivery window
- USPS IMb Tracing Delivery Scans Volume/% – The total volume and % of mail pieces that have received a final event scan at the destination USPS. This volume is considered out for delivery and is assumed to be delivered the same day
- Average To Date – The USPS average delivery days it took for a mail piece to be delivered. Calendar Days reflect the minimum and maximum number of days one mail piece took to be delivered, and an overall average based on calendar days. There is a difference in the USPS Avg and Calendar days based on the fact that the USPS Avg excludes Sunday's when the final event scan occurs on a Monday
- Customer IMb Tracing Statistics report can be used to isolate IMb Tracing data by Job, Serial Number (single mail piece), and/or Serial Number range (a series of mail pieces)
 - The Mailer ID and Serial Number range must be used in tandem to retrieve data back
 - The Mailer ID and Serial Number range can only be used if the IMb is sprayed on the mail piece by the customer
 - If the customer is the owner of the Mailer ID, they must setup PBPS as a recipient of their scan data through their USPS IMb Tracing account

Report Facts

- Report identifies geographic distributions. These correspond to USPS Delivery Standards. Local = 1 day delivery, Regional = 2 day delivery, National = 3+ day delivery. Delivery Standards are different for Standard Class Mail
- Report identifies Area Details which include all districts assigned to that area per the USPS
- Report identifies Mailing Center and USPS Facility the mail was submitted to. The report will show delivery on local mail from the originating center, as well as the mail sent out through Mail Exchange and submitted at the destination center
- Delivery days are calculated from the mailing date to the final event scan excluding Sundays as a transit day when the final event scan occurs on Monday
- USPS Goals (stated by Megan Brennan USPS COO - 2011)
 - 1 Day – 96.5%
 - 2 Day – 94.15%
 - 3 – 5 Day – 92.85%

Mailer ID
Seq. # From
Seq. # To

Submit

Customers can pull data historically for the past 75 days. IMb Tracing data is only retained for the timeframe identified and is purged after this point from our database.

Mail Piece Tracking

Report Facts

- Date Range on report cannot exceed 30 days  Range cannot exceed 30 days
- Delivery Point – The 11-digit USPS Delivery Point Barcode. If the customer knows the address of the recipient they can go to <http://zip4.usps.com/zip4/welcome.jsp> to find the Delivery Point Barcode, and use this information to confirm delivery. If multiple pieces are going to the same Delivery Point (Ex. John Doe and Jane Doe), the system cannot identify which recipient received the piece if only one piece has a final event scan
- Intelligent Mail Identifier – The first twenty digits of the IMb. Customer may use the Mailer ID and Serial Number to uniquely identify a mail piece
- PBPS Process Time – The date and time that the mail ran down a PBPS sorter machine. This is based on the final pass run
- Operation – The USPS operation codes for each scan received on USPS equipment. The most frequently seen operations are:
 - DBCS/DIOSS BCS DPS, 1st Pass (Stop-the-Clock event, Out for Delivery)
 - Delivery Point Sequence - 1st pass requires additional processing on automated equipment in most cases; last processing from some mail pieces.
 - DBCS/DIOSS BCS DPS, 2nd Pass (Stop-the-Clock event, Out for Delivery)
 - Delivery Point Sequence – 2nd pass final processing of mail.
 - DBCS (Delivery Bar Code Sorter – newer machines); DIOSS (Delivery Bar Code Sorter with Input/Output Subsystem)
- For more operation codes refer to IMb Tracing Reference Data Tables on <https://mailtracking.usps.com>
- USPS Event Date Time – The date and time USPS operation occurred
- Calendar Days – The total number of calendar days from PBPS 1st process time to the final event scan
